The study of Google's Cartographer

From Real-Time Loop Closure in 2D LIDAR SLAM

To IMPROVING GOOGLE' S CARTOGRAPHER 3D MAPPING BY CONTINUOUS-TIME SLAM

张旭东

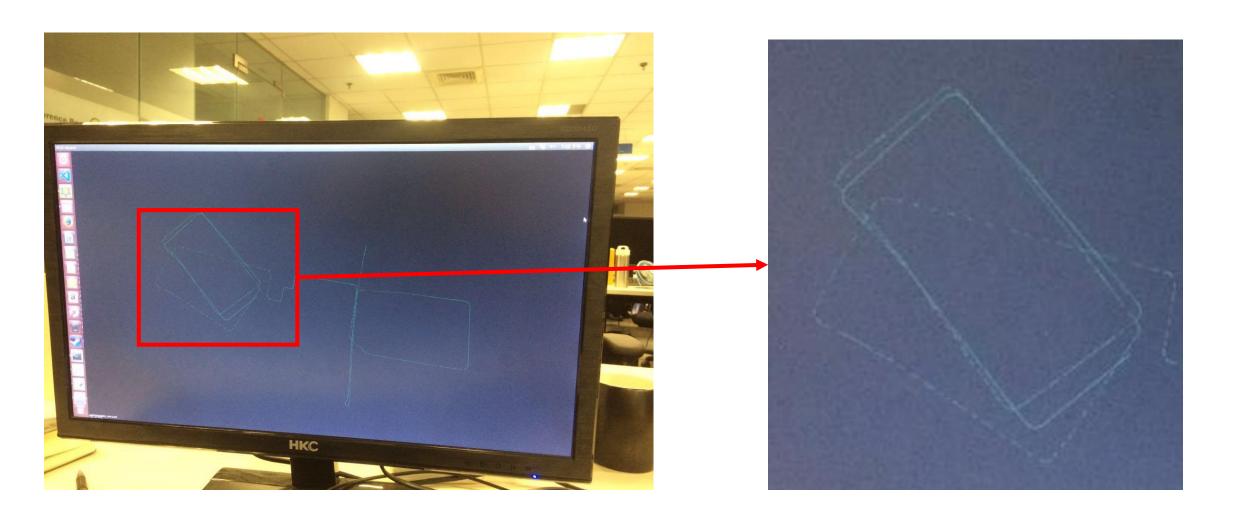

What is loop closure detection of SLAM?

Without loop closure

With loop closure

What trouble we have

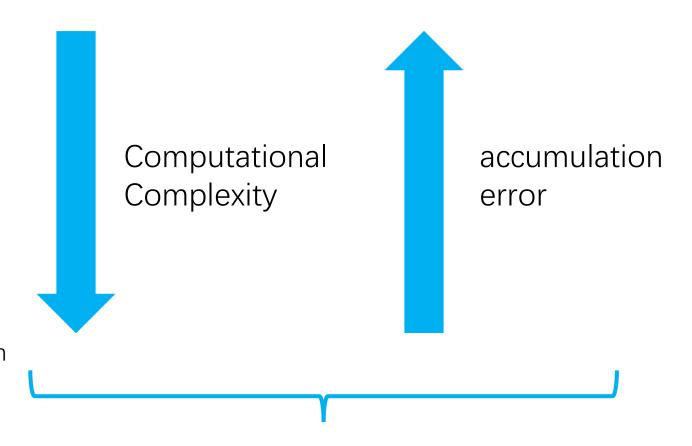

Classification of SLAM (lidar)

• Scan-to-scan ← LOAM

Scan-to-map

• Pixel-accurate scan

Loop closure detection

Main problem

What does Cartographer do?

1. Loop closure detection using submaps

2. Reduce computational complexity using branch-and-bound scan matching

What is the submap?

Discussion with the 2d lidar point cloud

$$\xi = (\xi_x, \xi_y, \xi_\theta)$$
translation rotation

$$T_{\xi}p = \underbrace{\begin{pmatrix} \cos \xi_{\theta} & -\sin \xi_{\theta} \\ \sin \xi_{\theta} & \cos \xi_{\theta} \end{pmatrix}}_{R_{\xi}} p + \underbrace{\begin{pmatrix} \xi_{x} \\ \xi_{y} \end{pmatrix}}_{t_{\xi}}.$$

What is the submap?

$$odds(p) = \frac{p}{1-p},\tag{2}$$

 $M_{\text{new}}(x) = \text{clamp}(\text{odds}^{-1}(\text{odds}(M_{\text{old}}(x)) \cdot \text{odds}(p_{\text{hit}})))$

& equivalently for misses.

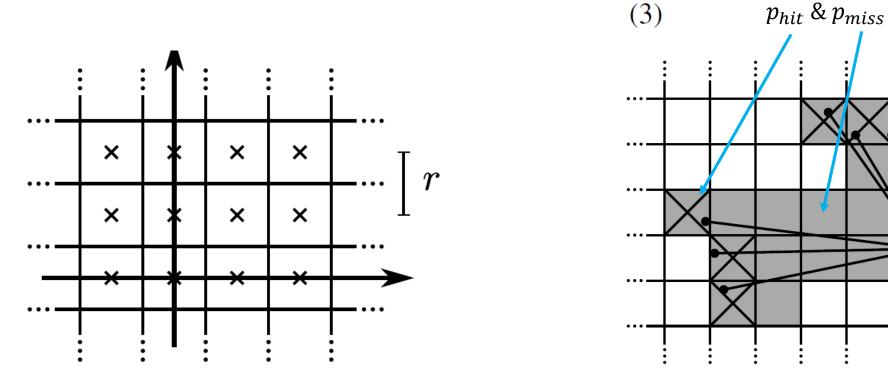

Fig. 1. Grid points and associated pixels.

Fig. 2. A scan and pixels associated with *hits* (shaded and crossed out) and *misses* (shaded only).

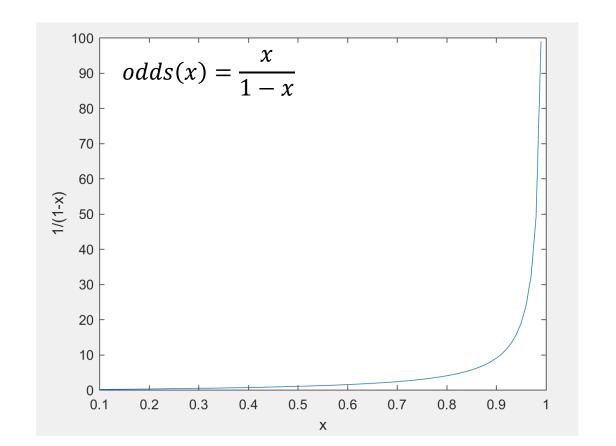

What is the submap?

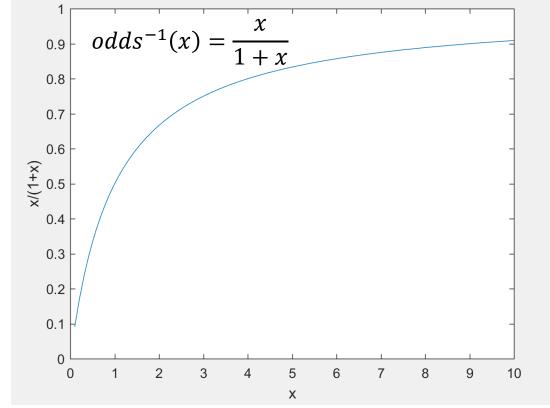

$$odds(p) = \frac{p}{1-p},\tag{2}$$

 $M_{\text{new}}(x) = \text{clamp}(\text{odds}^{-1}(\text{odds}(M_{\text{old}}(x)) \cdot \text{odds}(p_{\text{hit}})))$

& equivalently for misses.

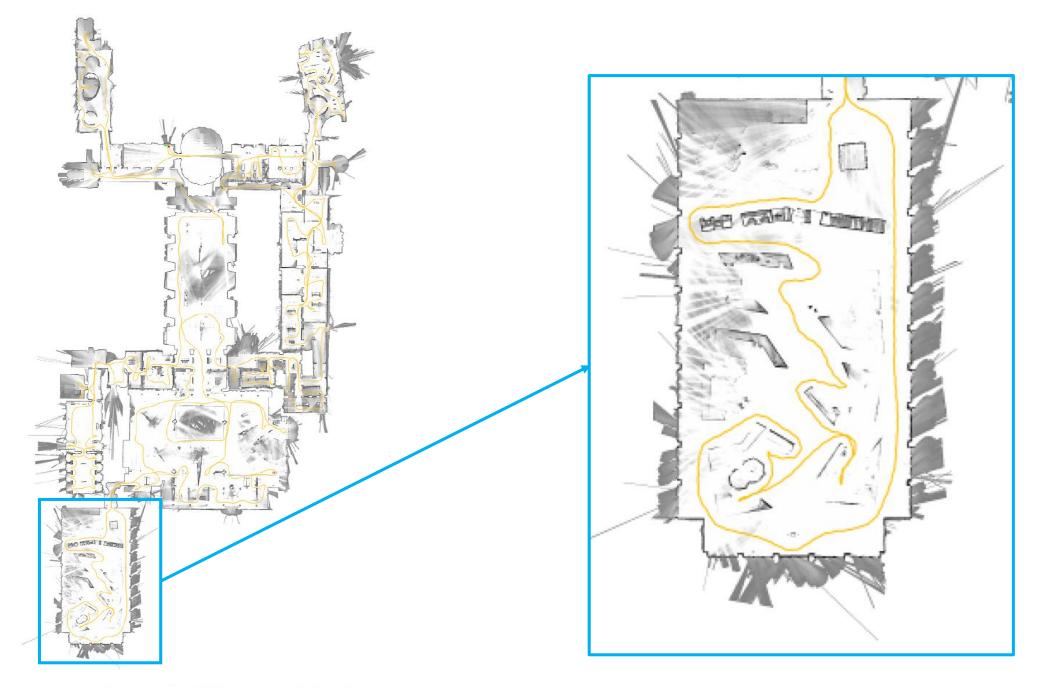

Fig. 4. Cartographer map of the 2nd floor of the Deutsches Museum.

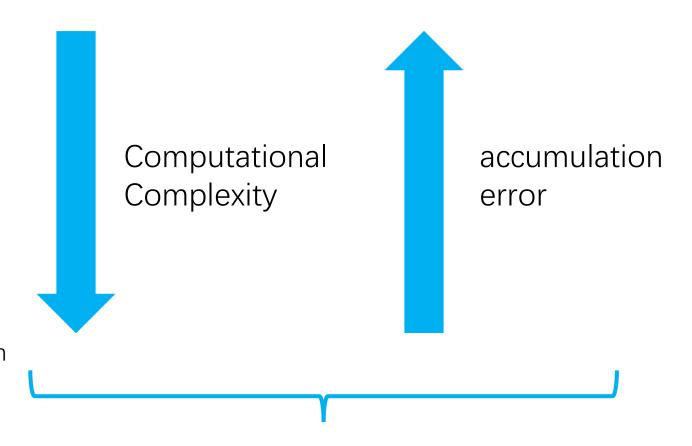

Classification of SLAM (lidar)

• Scan-to-scan ← LOAM

Scan-to-map

• Pixel-accurate scan

Loop closure detection

Main problem

How to produce submaps?

Ceres scan matching

$$\underset{\xi}{\operatorname{argmin}} \quad \sum_{k=1}^{K} \left(1 - M_{\text{smooth}}(T_{\xi}h_k) \right)^2 \qquad (CS) \approx ICP$$

Ceres Solver¶ ← Open source

Ceres Solver [1] is an open source C++ library for modeling and solving large, complicated optimization problems. It can be used to solve Non-linear Least Squares problems with bounds constraints and general unconstrained optimization problems. It is a mature, feature rich, and performant library that has been used in production at Google since 2010. For more, see Why?

What is the loop closure of Cartographer?

• SPA

$$\underset{\Xi^{\mathrm{m}},\Xi^{\mathrm{s}}}{\operatorname{argmin}} \quad \frac{1}{2} \sum_{ij} \rho \left(E^{2}(\xi_{i}^{\mathrm{m}}, \xi_{j}^{\mathrm{s}}; \Sigma_{ij}, \xi_{ij}) \right) \tag{SPA}$$

where the submap poses $\Xi^{\rm m} = \{\xi_i^{\rm m}\}_{i=1,\ldots,m}$ and the scan poses $\Xi^{\rm s} = \{\xi_j^{\rm s}\}_{j=1,\ldots,n}$ in the world are optimized given some *constraints*.

Efficient Sparse Pose Adjustment for 2D Mapping

Abstract—Pose graphs have become a popular representation for solving the simultaneous localization and mapping (SLAM) problem. A pose graph is a set of robot poses connected by nonlinear constraints obtained from observations of features common to nearby poses. Optimizing large pose graphs has

How to make it fast?

Branch-and-bound scan matching → efficiency

$$\xi^{\star} = \underset{\xi \in \mathcal{W}}{\operatorname{argmax}} \sum_{k=1}^{K} M_{\text{nearest}}(T_{\xi} h_{k}), \tag{BBS}$$

$$d_{\max} = \max_{k=1,\dots,K} ||h_k||,$$
 (6)

$$\delta_{\theta} = \arccos(1 - \frac{r^2}{2d_{\text{max}}^2}). \tag{7}$$

$$d$$
 d

$$w_x = \left\lceil \frac{W_x}{r} \right\rceil, \quad w_y = \left\lceil \frac{W_y}{r} \right\rceil, \quad w_\theta = \left\lceil \frac{W_\theta}{\delta_\theta} \right\rceil.$$
 (8) $\left\lceil \frac{W_x = W_y = 7m}{W_\theta = 30^\circ} \right\rceil$

$$\overline{W} = \{-w_x, \dots, w_x\} \times \{-w_y, \dots, w_y\} \times \{-w_\theta, \dots, w_\theta\},$$
(9)

$$\mathcal{W} = \{ \xi_0 + (rj_x, rj_y, \delta_\theta j_\theta) : (j_x, j_y, j_\theta) \in \overline{\mathcal{W}} \}. \tag{10}$$

Algorithm 1 Naive algorithm for (BBS)

```
best\_score \leftarrow -\infty
for j_x = -w_x to w_x do
   for j_y = -w_y to w_y do
      for j_{\theta} = -w_{\theta} to w_{\theta} do
          score \leftarrow \sum_{k=1}^{K} M_{\text{nearest}}(T_{\xi_0 + (rj_x, rj_y, \delta_\theta j_\theta)} h_k)
          if score > best\_score then
             match \leftarrow \xi_0 + (rj_x, rj_y, \delta_\theta j_\theta)
              best\_score \leftarrow score
          end if
       end for
   end for
end for
return best_score and match when set.
```

Is it fast enough?

• Depth-first search (DFS) ≈scale

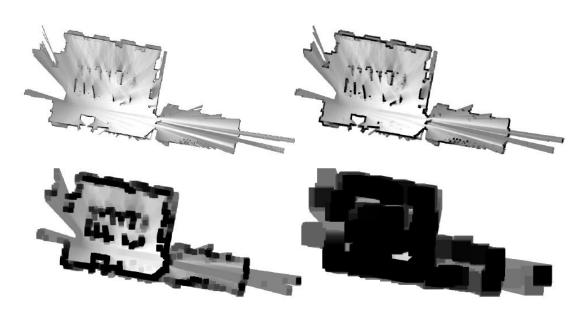

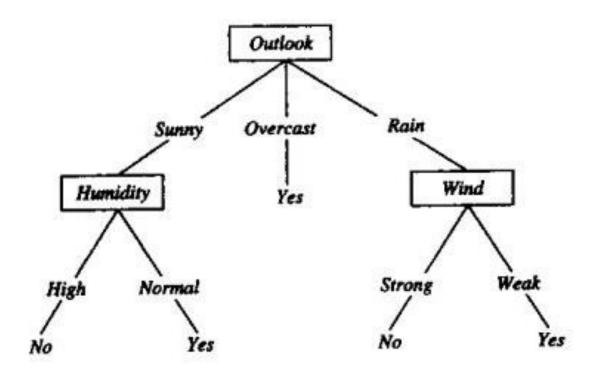

Fig. 3. Precomputed grids of size 1, 4, 16 and 64.

Details?

$$c = (c_x, c_y, c_\theta, c_h) \in \mathbb{Z}^4$$

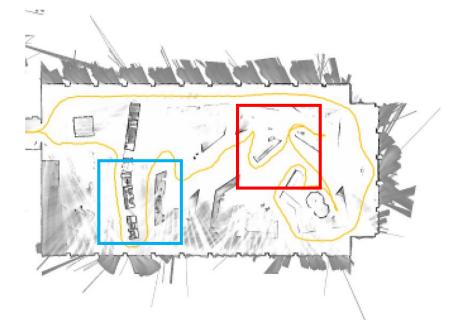

$$\overline{\overline{W}}_{c} = \left(\left\{ (j_{x}, j_{y}) \in \mathbb{Z}^{2} : \right. \right.$$

$$c_{x} \leq j_{x} < c_{x} + 2^{c_{h}}$$

$$c_{y} \leq j_{y} < c_{y} + 2^{c_{h}} \right\} \times \{c_{\theta}\}$$

$$(11)$$

$$\overline{\mathcal{W}}_c = \overline{\overline{\mathcal{W}}}_c \cap \overline{\mathcal{W}}. \tag{12}$$

Algorithm 2 Generic branch and bound

```
best\_score \leftarrow -\infty
\mathcal{C} \leftarrow \mathcal{C}_0
while \mathcal{C} \neq \emptyset do
   Select a node c \in \mathcal{C} and remove it from the set.
   if c is a leaf node then
      if score(c) > best\_score then
         solution \leftarrow n
         best\_score \leftarrow score(c)
      end if
   else
      if score(c) > best\_score then
         Branch: Split c into nodes C_c.
         \mathcal{C} \leftarrow \mathcal{C} \cup \mathcal{C}_c
      else
         Bound.
      end if
   end if
end while
return best_score and solution when set.
```

Algorithm 3 DFS branch and bound scan matcher for (BBS) $best_score \leftarrow score_threshold$ Compute and memorize a score for each element in C_0 . Initialize a stack C with C_0 sorted by score, the maximum score at the top. while C is not empty do Pop c from the stack C. if $score(c) > best_score$ then if c is a leaf node then $match \leftarrow \xi_c$ $best_score \leftarrow score(c)$ else Branch: Split c into nodes C_c . Compute and memorize a score for each element in \mathcal{C}_c . Push C_c onto the stack C, sorted by score, the maximum score last. end if end if end while **return** best_score and match when set.

Is it effective?
